PROFESSIONAL SUMMARY

Final-year Big Data Analytics student at Universiti Teknologi PETRONAS, minoring in Accounting & Finance, with experience in data analytics, machine learning, and business performance analysis. Completed a research internship at Deakin University's IISRI, Australia, and contributed to a commercial analytics project with Glocomp Systems. Skilled in Python, SQL, data visualization, and predictive modeling.

EDUCATION

Bachelor of Information Technology (Honours) | Universiti Teknologi PETRONAS

Major: Big Data Analytics | Minor: Accounting & Finance | CGPA: 3.65/4.00 | Expected Graduation: December 2026

ICAEW Certificate in Finance, Accounting and Business (CFAB) | Universiti Teknologi PETRONAS | Currently Persuing

TECHNICAL SKILLS

Data Analysis & Visualization: Python, SQL, Pandas, NumPy, Data Cleaning, KPI Analysis, ROI Tracking, Streamlit

Machine Learning & AI: PyTorch, TensorFlow, Random Forest, YOLOv12, EfficientNet, Predictive Modeling, Image Segmentation

Computer Vision & Sensor Fusion: OpenCV, MediaPipe, RGB-IR Fusion, Spatial Gating Modules, CUDA

Software Development & Tools: C#, Git, PyTorch Lightning, Albumentations

PROFESSIONAL EXPERIENCE

Digital Agent | KABEL DXP, YEI 3.0: Youth Innovation Sandbox ***September 2026 – October 2026***

Commercial Team ROI & Contribution Visibility Dashboard

- Developed a centralized performance dashboard across **4 organizational levels**, consolidating financial and operational KPIs to simplify reporting and improve business visibility.
- Built ROI tracking for revenue, profit, collections, and employee costs to support financial analysis and management decisions.
- Designed contribution tracking and role-based KPI scorecards to improve performance transparency and prevent double-counting of shared deals.
- Automated alerts for low margins, overdue collections, and underperforming KPIs to support earlier identification of business risks.
- Developed AI-assisted KPI recommendations and approval workflows to support performance planning and data governance.

Machine Learning Intern | Deakin University, IISRI, Australia ***September 2025 – April 2026***

Multimodal Sensor Fusion & Computer Vision Research

- Developed RGB-thermal deep learning pipelines using YOLOv12 and EfficientNet to support earlier wildfire detection and automated infrastructure monitoring.
- Integrated spatial gating modules and class-imbalance loss functions to investigate multimodal detection performance.
- Conducted ablation studies and cross-dataset evaluations using Python and PyTorch to assess model accuracy, robustness, and generalization.

Real-Time Stress Monitoring in VR Environment

- Developed a real-time biometric monitoring system to support continuous physiological assessment in VR environments.

- Designed a bio-responsive VR interface integrating real-time sensor processing, visualization, and adaptive responses to predefined stress thresholds.

PROJECTS

Action Recognition AR for ROV Safety Assessment | Final Year Project ***May 2026 – December 2026***

- Developed a Python hand-action recognition pipeline using MediaPipe Hands and Random Forest to support automated ROV safety training assessment.
- Integrated HoloLens 2 eye-gaze tracking with MRTK3 and OpenXR to enable interactive mixed-reality training and improve user interaction.
- Implemented real-time UDP communication with **sub-100ms latency** to deliver responsive action recognition feedback during ROV safety training.

ECCO: Interprofessional VR Training Platform | INNOCOM AID Innovation Competition

- Designed a multi-user VR training platform for collaborative learning between medical and paramedic teams.
- Developed the proposed system architecture and educational framework to demonstrate a scalable approach to immersive healthcare training.
- Presented the platform's technical feasibility and practical applications through a competition pitch, highlighting its potential to enhance team coordination and training accessibility.

LEADERSHIP

Project Director | Festival of Colours of the World (FESCO) 2025, UTP

- Directed an international multicultural event with 2,400+ audience members and 500+ participants across 32 competing teams.
- Led a 130+ member cross-functional committee overseeing operations, budgeting, stakeholder coordination, and project delivery.

President | UTP Performing Arts Group (UPAG)

- Led a 50+ member student organization, overseeing strategic planning, events, and performance development.
- Coordinated university performances, training, and collaborations with internal and external stakeholders.

AWARDS & ACHIEVEMENTS

- Dean's List — Universiti Teknologi PETRONAS (Every Semester)
- Top 3 Finalist — Distinguished President Award, Student Excellence Awards 2025
- Best Presenter Silver Award — ECCO, INNOCOM AID Innovation Competition
- Gold Award (2023); Bronze Award & Best Choreography (2024) — Cheonan World Dance Festival, South Korea
- IEEE AISS 2025 Scholarship Recipient
